

Bend

Our intention while designing Bend was to create a basic bucket chair with an all-metal structure. Hollow tubes of different cross-sections are bent at the same radius to form parts of this chair, hence the name Bend. A compact set of cantilevered Back and Seat are both made in moulded polyurethane foam to get the perfect and comforting semi-circle shape when seen from the top. Seamless joinery of metal inserts is composed to fit the Back to the pipe structure and perfectly arced cantilevered base frame to compliment the chair.

Bend

Bend family includes a four-legged compact revolving chair for the non-traditional office spaces, casual meeting rooms, and children’s study room in residences. Also, a bar stool with a footrest for high tables is available both with and without castors.

Bend

We have a set of continuous running seating in the Bend family; this is also an all-metal construction. Following the same design pattern, a single pipe frame is bent at various points to form this seating's base. The side table tops can be customised in shape and material to suit the client's choice.
